

# Rafforzare il PCI per la lotta di massa contro il centro-destra

1. **Conclusions:** The results of this study suggest that the use of a single, standardized, and validated questionnaire can provide a reliable and valid measure of the prevalence of mental health problems in a community sample. The results also suggest that the prevalence of mental health problems is higher in the community than in the clinical sample, and that the prevalence of mental health problems is higher in the community than in the clinical sample.
